Seva's Approach in Myanmar

Seva's approach in Myanmar focuses on training front line HIV doctors to examine their patients using an indirect ophthalmoscope through the AIDS Eye Initiative and our partnership with Medical Action Myanmar (MAM).

Medical Action Myanmar (MAM) is a non-governmental organization with a mission to improve access to health care all people on Myanmar. Myanmar experiences high rates of HIV, with approximately 200,000 people living with AIDS. Seva's work with MAM enables HIV doctors to detect and treat blinding CMV Retinitis. These trained health workers can also detect tuberculosis using this technique, allowing early treatment of TB. Seva is working with its partners to develop and roll out online learning modules to complement these trainings. Seva is working with Myanmar's leading ophthalmologists, the Government, and several non-Governmental eye care organizations to promote an effective national eye care plan.

In addition to our work with MAM, Seva has previously supported the training of eye care personnel in Myanmar. During the past year, our last cohort of trainees included an ophthalmologist from Myanmar who completed her residency program in Nepal.

Impact of COVID-19 in Myanmar

Myanmar experienced its first wave of COVID-19 in November 2020 with a peak of 1,700 new daily new cases. In July 2021, the second wave arrived peaking at 6,700 new daily cases recorded.

The COVID-19 situation in Myanmar has been compounded by the military coup in early 2021. On February 1, Myanmar's military seized power from the civilian government. Political unrest, economic instability, and collapse of the health system created a hospitable environment for the virus to surge.

In light of the pandemic and current political siltation, Seva's in-person trainings with MAM have been postponed. Seva and MAM continue to

collaborate virtually. Seva is also working with its partners to develop and roll out online learning modules to complement these trainings.

Seva has also continued to support an ophthalmologist from Myanmar who was enrolled in a residency program in Nepal.

SPOTLIGHT ON BUILDING CAPACITY

Dr. Lily Myint started her residency course in MD Ophthalmology in Lumbini Eye Hospital (LEI) in September 2018. During her course, she had the chance to gain practical experience in different department, such as pediatrics, retina, glaucoma, and cornea, under the mentorship of senior doctors. She has already performed more than 50 cataract surgeries and has gained surgical skills in sub-specialty surgeries as well. After her final exams in October 2021, she is planning to pursue a fellowship or additional training at a Seva partner hospital in Nepal.

She is extremely grateful to Seva Foundation for sponsoring her courses and when time will be appropriate, she wishes to return to her home country of Myanmar to serve the poor patients and rural people.
